Biomarker Descriptions

ALK (ALK receptor tyrosine kinase)

Background: The ALK gene encodes the ALK receptor tyrosine kinase (RTK) with sequence similarity to the insulin receptor subfamily of kinases¹. ALK is the target of recurrent alterations in cancer, the most common being chromosomal rearrangements that generate fusion genes containing the intact ALK tyrosine kinase domain combined with multiple partner genes². ALK fusion kinases are constitutively activated and drive oncogenic transformation via activation of downstream STAT3, PI3K/AKT/MTOR, and RAS/RAF/MEK/ERK pathways^{2,3,4,5}.

Alterations and prevalence: ALK was discovered by positional cloning of translocations involving nucleophosmin (NPM) on 5q35 with a previously unidentified RTK on 2p23 (ALK), which occur in over 50% of anaplastic large cell lymphoma cases (ALCL)^{1,6}. In contrast, about 5% of non-small cell lung cancer (NSCLC) cases generate recurrent ALK fusions with EML4, KIF5B, and HIP1^{7,8,9}.

Potential relevance: The first generation small molecule tyrosine kinase inhibitor (TKI), crizotinib¹⁰, was FDA approved (2011) for the treatment of ALK positive advanced NSCLC as well as ALK positive ALCL or inflammatory myofibroblastic tumor (IMT). Kinase domain mutations including L1196M, G1269A, F1174L, G1202R, as well as other variants have been shown to confer acquired resistance to crizotinib in ALK positive NSCLC^{11,12,13,14}. Other mechanisms of acquired resistance involve amplification of the ALK fusion gene and activation of alternate or bypass signaling pathways involving EGFR, KIT, MET, and IGF1R¹⁵. In order to overcome acquired resistance, second and third-generation ALK inhibitors including ceritinib¹⁶ (2014), alectinib¹⁷ (2015), brigatinib¹⁸ (2017), and lorlatinib¹⁹ (2018) were developed and approved by the FDA. Two phase III trials evaluating crizotinib and alectinib as first line therapy in NSCLC, including patients with asymptomatic central nervous system (CNS) disease, were conducted and both studies showed consistent higher objective response rates (ORR) with alectinib relative to crizotinib^{20,21}. For this reason, alectinib is a preferred first-line treatment of ALK positive NSCLC²².

Relevant Therapy Summary

EML4-ALK fusion					
Relevant Therapy	FDA	NCCN	EMA	ESMO	Clinical Trials*
crizotinib	0	0	•	•	×
ceritinib	•	0	•		(IV)
lorlatinib	•	0	•	•	(IV)
brigatinib		0	•		×
alectinib	•	•	•	•	×
next-generation ALK inhibitor	×	×	×	•	×
brigatinib, alectinib	×	×	×	×	(III)
repotrectinib	×	×	×	×	(I/II)

^{*} Most advanced phase (IV, III, II/II, II, I/II, I) is shown and multiple clinical trials may be available.

FDA information is current as of 2022-11-16. For the most up-to-date information, search www.fda.gov.

EML4-ALK fusion

crizotinib

Cancer type: Inflammatory Myofibroblastic Label as of: 2022-07-14 Variant class: ALK fusion Tumor, Non-Small Cell Lung Cancer

Indications and usage:

XALKORI® is a kinase inhibitor indicated for the treatment of

- patients with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK) or ROS1-positive as detected by an FDA-approved test.
- pediatric patients 1 year of age and older and young adults with relapsed or refractory, systemic anaplastic large cell lymphoma (ALCL) that is ALK-positive.
 - Limitations of Use: The safety and efficacy of XALKORI® have not been established in older adults with relapsed or refractory, systemic ALK-positive ALCL.
- adult and pediatric patients 1 year of age and older with unresectable, recurrent, or refractory inflammatory myofibroblastic tumor (IMT) that is ALK-positive.

Date: 12 Jan 2023 4 of 18

EML4-ALK fusion (continued)

alectinib

Cancer type: Non-Small Cell Lung Cancer Label as of: 2021-09-03 Variant class: ALK fusion or ALK overexpression

Indications and usage:

ALECENSA® is a kinase inhibitor indicated for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test.

Reference:

https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/208434s012lbl.pdf

brigatinib

Cancer type: Non-Small Cell Lung Cancer Label as of: 2022-02-28 Variant class: ALK fusion

Indications and usage:

ALUNBRIG® is a kinase inhibitor indicated for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test.

Reference:

https://www.accessdata.fda.gov/drugsatfda_docs/label/2022/208772s013lbl.pdf

ceritinib

Cancer type: Non-Small Cell Lung Cancer Label as of: 2021-10-07 Variant class: ALK fusion or ALK

overexpression

Indications and usage:

ZYKADIA® is a kinase inhibitor indicated for the treatment of adults with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test.

Reference:

https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/211225s004lbl.pdf

lorlatinib

Cancer type: Non-Small Cell Lung Cancer Label as of: 2021-03-03 Variant class: ALK fusion or ALK

overexpression

Indications and usage:

LORBRENA® is a kinase inhibitor indicated for the treatment of adult patients with metastatic non-small cell lung cancer (NSCLC) whose tumors are anaplastic lymphoma kinase (ALK)-positive as detected by an FDA-approved test.

Reference:

https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/210868s004lbl.pdf
